

All Systems Go Ltd

Complete IT and Compliance Solution Providers

AUGUST 2014 – Issue 18

We are moving! In more ways than one.....

In a physical sense the office is going to be relocating to a bigger brighter space down the road on the hill behind Tip Top. The new office at, 10A Te Apunga Place, is looking great and we hope to be there by the end of August. We will let you know as soon as we are in!

Having a hosted environment, with Microsoft, means minimal disruption throughout the move and being able to get a Fibre UFB connection to the new address opens the door for not only fast internet for the team but also running our phone system over SIP which will reduce costs. Due to UFB not having any service level agreements and no performance guarantees we will also have a VDSL connection as a backup to this.

Then moving in a virtual sense, the Microsoft Azure roadmap of hosted infrastructure. It is possible to have your servers, workstations, applications, in fact pretty much entire configuration stored on a hosted platform. Azure is going to feature more and more in the near future. What we are used to now is a model where data is stored on, and many apps are run from, servers on the local network.

The next step will move apps and data storage even farther away from the end user, into the "cloud," with everything residing on remote servers accessed via the Internet. This will allow users to access those programs and data anywhere, from any Internet-connected machine, including low-powered (and low-cost) netbooks or tablet PC's, even your smartphone. Obviously the speed and availability of internet services will play heavily on how effective this configuration can be.

Charles is doing great. In year 3 now and very involved in Rugby, Swimming, Flippa Ball and Scottish Country Dancing, with school work in amongst it all. He is making a very determined effort to be taller than me as soon as possible

We are also embarking on a new chapter with a plan of moving the family home to start a new adventure building with my parents in Mission Bay.

We're still doing a lot of travel at the moment but have a great team at All Systems Go, who are ready and willing to tackle any challenge thrown at them. It's All Systems Go this year. Bring it on!

Valerie and Tim Adams

Time and time again we deal with customers that need to restore data only to discover they have failed backups. Monitored backups are always the best solution and we can provide maintenance agreements for customers that require this level of security. However some of you may prefer a reliable “hands-free” approach to back up your data offsite.

Keep It Safe is a New Zealand based online backup provider. There are a number of reasons why we partner with Keep It Safe. They keep your data in New Zealand is one of them. Other online backup providers typically ship your data off-shore. Fine for some customers but if you have large amounts of data that you want back quickly (they will send you a disc overnight to restore from), this may not be the cheapest, most effective place to store your data. Keep It Safe also have an 0800 number here in New Zealand, they will seed load your data for free, restore for free and provide technical support.....also FREE!

Sound good? How about first month free as well!! As a special offering we have negotiated your first month free terms with Keep It Safe as well to get you going. So if you'd like a hands free, online and offsite backup solution give me a call or drop me an email for pricing.

Meet the Team

Nathan Scott – Compliance Systems Consultant

My journey into Food Compliance started after finishing High School as I worked for over six years as a Chef for various restaurants in Canterbury. I then undertook study at Lincoln University, completing a Bachelor of Commerce in the Food Industry. This led me to opportunities to gain experience in a variety of manufacturing businesses and industry laboratories in Australia and New Zealand including Flour Milling, Sugar Refinery, Water and Soil Testing and Poultry Processing. Whilst in those roles I achieved the status of a Laboratory Approved Signatory under IANZ and MPI.

I have continued my studies throughout my career, having completed the majority of requirements for a Graduate Diploma in Environmental Health and look forward to finishing the course at a later date. Other training included an Advance Auditing Skills course by AsureQuality (NZQA 8084 and 8085) and I am currently under mentorship by our Compliance Manager Stephanie Carbone.

I am looking forward to my journey in Auckland and being able to work with existing and new clients.

Ingram Micro Hospitality Event at the Vodafone Warriors.
